Classification of the disease- Project Proposal

30 October 2021

OVERVIEW

We received a request from the health authorities to create a system that classifies the diseased case from the regular cases, and the project will lay the basic building block for the classification process for a database on a broad segment of society.

GOALS

1. Make a qualitative classification of the referral received on the model to know the affected case from the normal cases.

2. Provide a balanced analysis of the number of people tested and by the system.

3. Ensure the correctness, effectiveness, and accuracy of the model after running.

Project Scope

This project's scope relates to working on a large segment of people in the database to know the sick from the normal condition.

MILESTONES AND STEPS

- Frame the problem.
- Research and analysis of the database.
- Collect the raw data needed to solve problem.
- qualitative classification of data and run the model
- Perform in-depth analysis.
- Communicate results of the analysis.
